

Church Website Design

Jessica A. Miller

Project overview

The product:

I am revamping the websites for two parishes: The Church of the Most Precious Blood and Saint Theresa of Lisieux Parish. The Archdiocese of Boston has not provided branding guidelines for this project, the second of three planned over a decade. My goal is to add online donation features.

Project duration:

January 2011 to May 2011

Project overview

The problem:

The two parishes work in partnership, but the current website does not show this. It is hard to navigate and lacks visual appeal. The site also needs to meet the Archdiocese of Boston's requirements.

The goal:

Revamp the website to highlight the partnership between the two parishes and make it user-friendly and visually appealing. Built on Joomla, it will allow easy updates and efficient management. The site will be fully responsive, with intuitive navigation, and will meet Archdiocese of Boston standards.

Project overview

My role:

As the UX designer, I led the website redesign to improve the user experience.

Responsibilities:

Interviews, paper and digital wireframing, low- and high-fidelity prototyping, usability studies, accessibility, iterating on designs, and responsive design.

Understanding the user

- User research
- Personas
- Problem statements
- User journey maps

User research: summary

Through user interviews and empathy maps, I gathered key insights into our target audience’s needs, which shaped the objectives for the website redesign. I found that users value the convenience and accessibility of online platforms for discovering and engaging with their community, but confusing navigation quickly turns a good experience into a frustrating one. This makes it hard for them to find information, use the site, and connect with the church.

User research: pain points

1

Navigation

Navigation issues include confusing menus, poor search, broken links, and difficulty finding information.

2

Interaction

Interaction problems include slow loading, cumbersome forms, lack of feedback, and buggy interfaces.

3

Experience

Experience pain points include cluttered design, unclear calls to action, poor content, and lack of trust signals.

Persona: **Eleanor Vance**

Problem statement:

Retired North Andover teacher (62) struggles with her parish's website. Outdated info, poor design, and difficult donations hinder her connection with the church.

Quote:

"I just want to find what I need quickly."

Background: Widow, active in community.

Goal: Easily find parish info (services, contacts, events) and donate online.

Frustrations: Difficult navigation, outdated content, cluttered design, poor mobile experience.

User journey map

I created a user journey map of Eleanor's experience using the site to find pain points and improvement opportunities.

Eleanor's Journey Map: Connecting with Her Parish Online

Action/Step	Task List	Feeling Adjective	Improvement Opportunity
1. Searching for the Parish Website	Opens Chromebook Types "Most Precious Blood, Dover MA" into Google Clicks on the first result	Hopeful, Determined	Ensure the church website is easily found in search results (SEO).
2. Navigating the Homepage	Scans the homepage for service times Looks for a "Contact Us" link Tries to find information about upcoming events	Frustrated, Confused	Simplify the homepage. Display service times and contact details clearly. Improve navigation with clear menus and an intuitive layout.
3. Finding Service Times	Clicks on a "Worship" link Scrolls through a long page of text Eventually finds the service times listed at the bottom	Annoyed, Relieved	Display service times prominently on the homepage or a dedicated "Visit Us" page. Use clear headings and formatting.

User journey map (continued)

I created a user journey map of Eleanor's experience using the site to find pain points and improvement opportunities.

Eleanor's Journey Map: Connecting with Her Parish Online

Action/Step	Task List	Feeling Adjective	Improvement Opportunity
4. Trying to Donate Online	Clicks on a "Donate" button Is redirected to a third-party website Finds the donation process confusing and lengthy	Overwhelmed, Hesitant	Simplify the donation process. Integrate donations into the website. Offer clear instructions and payment options. Make the process feel secure and trustworthy.
5. Contacting the Church	Clicks on the "Contact Us" link Finds an email address but no phone number Writes an email with a question about an upcoming event	Slightly Frustrated, Resigned	Provide multiple contact options (phone number, email, contact form). Ensure contact information is up-to-date and easy to find.

Starting the design

- Sitemap
- Paper wireframes
- Digital wireframes
- Low-fidelity prototype
- Usability studies

Sitemap

Eleanor struggled with website navigation, so I created a sitemap to address this pain point.

My goal was to improve the site's information architecture for simpler, more user-friendly navigation.

Main Navigation
Home
About Us
- Our History
- Our Staff
- Our Beliefs

Visit Us
- Service Times
- Location & Directions
- What to Expect

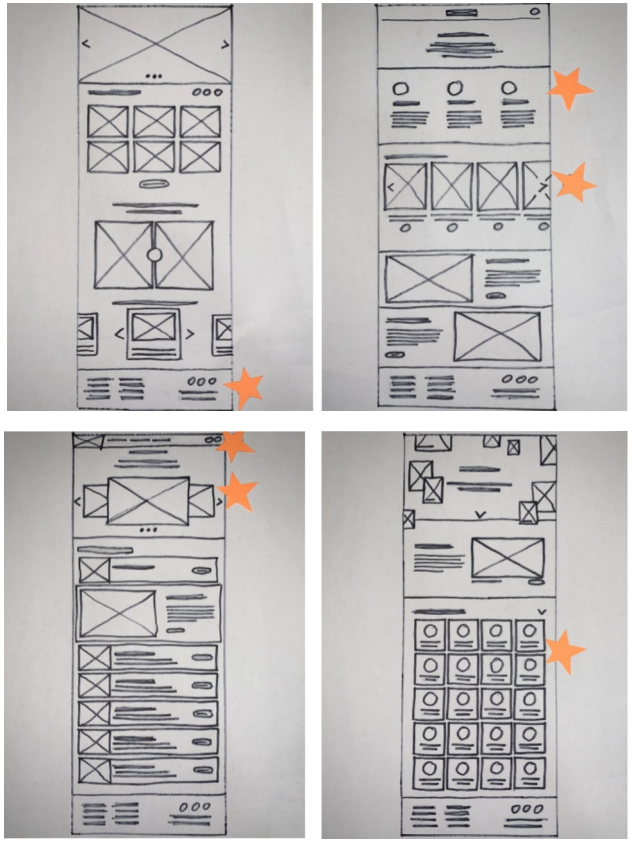

Connect Events
- Calendar
- News & Updates
- Contact Us

Give
- Online Donations
- Other Ways to Give

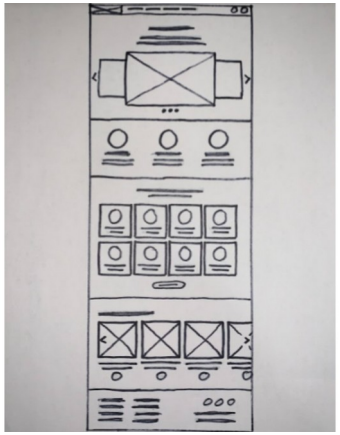

Footer
- Privacy Policy
- Terms of Service
- Contact Information (address, phone number, email)
  - Social Media Links (if applicable)

Paper wireframes

To address Eleanor's frustrations, I sketched wireframes for each website screen, prioritizing navigation, information browsing, and donations. The home screen variations (right) make key information quick to find.

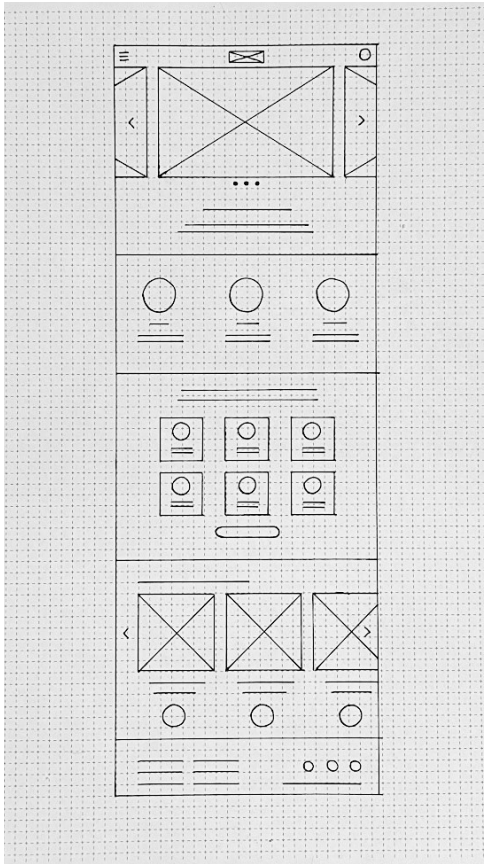

I marked the elements of each sketch with stars to use in the initial digital wireframes.

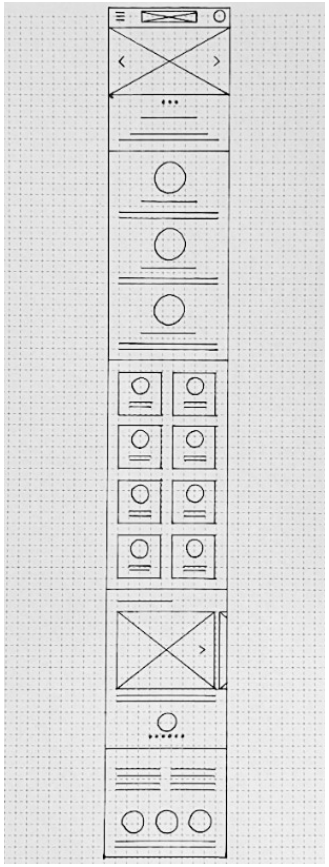

Refined paper wireframe

Paper wireframe screen size variations

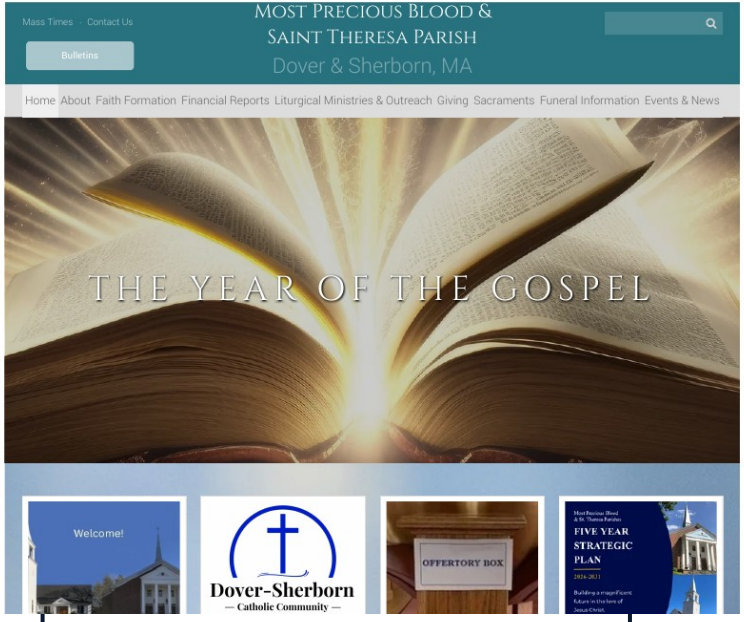

I designed for different screen sizes so the site works on any device. Users like Eleanor may access it on a Chromebook, tablet, or phone.

Digital wireframes

Digital wireframes showed how the redesign would ease Eleanor's frustrations and improve her experience. I focused on placing buttons and visual elements on the homepage for easy use.

Homepage with Mass times, parish news, and giving links.

The homepage makes browsing easy with an image carousel and navigation menu.

Digital wireframe screen size variations

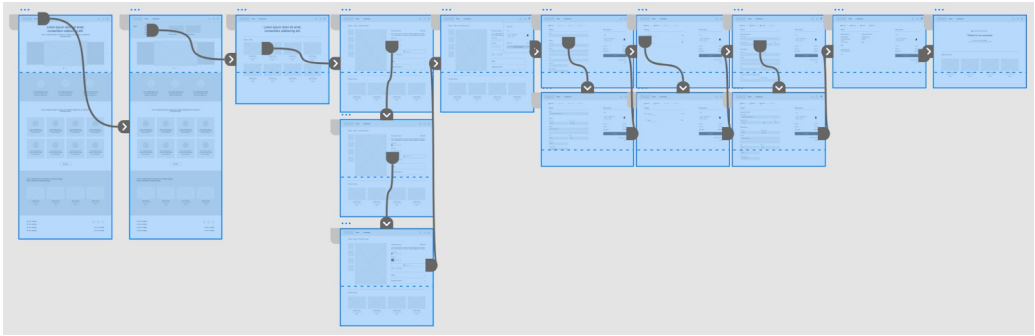

Parish homepage.

Parish homepage, continued.

Low-fidelity prototype

I linked all the screens in the primary user flow, from finding church information to donating online. I incorporated team feedback on button placement and page organization, focusing on suggestions that addressed Eleanor's pain points.

View low-fidelity prototype

Usability study: parameters

Study type:

Unmoderated usability study

Location:

United States, remote

Participants:

5

Length:

20-30 minutes

Usability study: findings

These were the main findings from the usability study:

1

Navigation Confusion

Participants struggled to find key information, such as service times and contact details. They need clearer navigation and information architecture.

2

Donation Process Difficulty

The online donation process was confusing and cumbersome. Multiple participants were frustrated by the multi-step process and unclear instructions.

3

Mobile Responsiveness

Several participants on tablets or smaller screens had layout issues and trouble interacting with some elements. This shows a need for better mobile responsiveness.

Refining the design

- Mockups
- High-fidelity prototype
- Accessibility

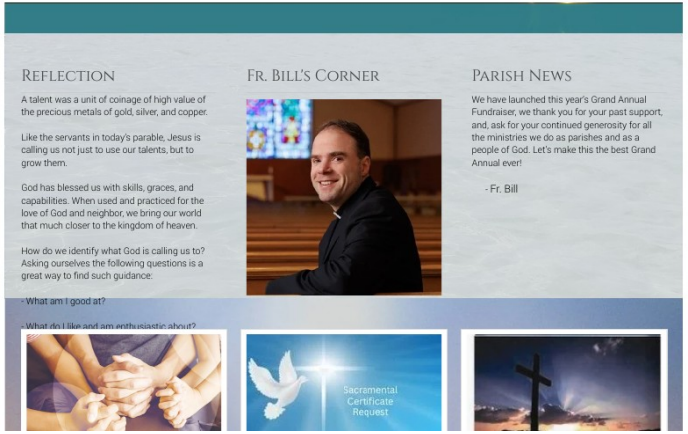

Parish homepage

Based on usability study insights, I revised the mockups to improve Eleanor's experience. A key change was simplifying the online donation process, which was confusing and too long.

Parish homepage

Parish homepage, continued

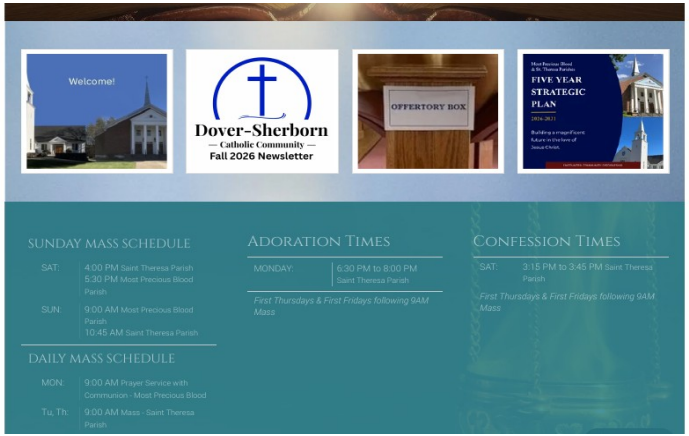

Screenshots from the current parish website (mpb-stp.org). The 2011 donation-flow mockups are not shown.

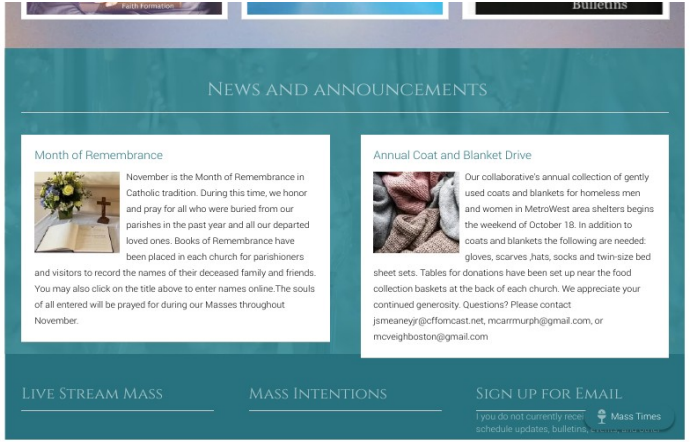

Parish homepage, continued

To simplify the donation process further for Eleanor, I added a checkbox so she can use the same information for her donation and contact details. This reduces redundant data entry.

Parish homepage

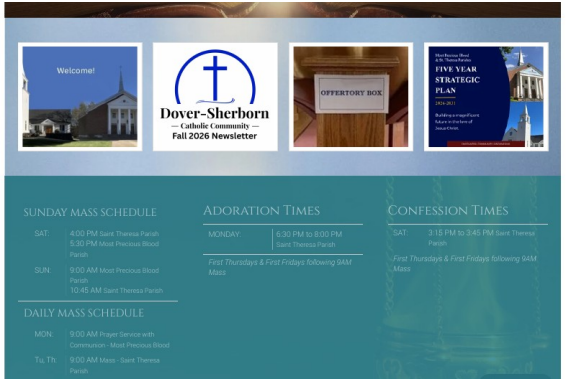

Parish homepage, continued

Screenshots from the current parish website (mpb-stp.org). The 2011 checkout mockups are not shown.

Parish homepage (mpb-stp.org)

Mockups: Screen size variations

Building on the wireframes, I designed mockups for various screen sizes. Users access the site from different devices, so I optimized the browsing experience for mobile, tablet, and desktop.

Screenshots from the current parish website (mpb-stp.org), which has changed since this 2011 redesign.

High-fidelity prototype

The high-fidelity prototype followed the low-fidelity prototype's user flow and included changes from the usability study and team feedback.

Parish homepage (mpb-stp.org). The 2011 high-fidelity prototype is not shown.

Accessibility considerations

1

Font Size and Contrast: Ensure sufficient font size and high contrast between text and background. Eleanor, like many older adults, may have vision changes that make small or low-contrast text hard to read. Allowing users to adjust font size also helps.

2

Keyboard Navigation: The website should be fully navigable using a keyboard alone. Some users may struggle with a mouse or trackpad, so keyboard accessibility is essential. This means clear visual focus indicators on interactive elements.

3

Screen Reader Compatibility: The website's content and structure should be compatible with screen readers. Screen readers are assistive technologies used by people with visual impairments. This involves using semantic HTML, providing alternative text for images, and ensuring proper heading structure.

Going forward

- Takeaways
- Next steps

Takeaways

Impact:

Improved user experience, increased engagement, enhanced church image.

What I learned:

User-centered design, usability testing, iterative design, and accessibility are essential.

Next steps

1

Conduct follow-up usability testing on the new website

2

Identify any additional areas of need and brainstorm new features

Let’s connect!

Thank you for reviewing my work on the church website redesign!
